

Sure here's a breakdown of (where vs having) in different contexts:

In general usage:

- **Where:** Used to specify a location or ask about a location. Ex: "Where is the library or "Where can I find good pizza".
- **Having:** Used to indicate possession or ownership. Ex: "I am having dinner. or He is having a meeting.

In SQL:

- **WHERE** : Filters individual rows in a table based on specific conditions before any grouping occurs. Used with `SELECT`, `INSERT`, and `UPDATE` statements.
- **HAVING** : Filters groups of rows after data has been grouped using the `GROUP BY` clause. Used only with `SELECT` statements.
